

DESIGN SYSTEM / V1.0

Built to be understood.

One recognizable Olanas across product,
developer tools and community.

STRUCTURE / SPACE / SIGNAL

A system the team can use.

A shared foundation for every screen, launch and conversation.

01

Use the real identity

Source-derived artwork. Fixed geometry. One consistent OLANAS wordmark.

02

Design for both themes

Shared components with separate semantic colours for light and dark.

03

Make it repeatable

Use the included logo SVGs, templates, fonts and CSS / JSON tokens.

FOUNDATIONS	PRODUCT	COMMUNICATION
Brand + identity / 03-06	Colour + type / 07-09	Voice + social / 16-17
Grid + spacing / 10	UI + iconography / 11-14	Telegram + layouts / 18-21
Signature motif / 15	Accessibility / 22	Handoff + ownership / 23-24

Clear infrastructure. Human language.

Olanas connects the ideas of AI agents, paid APIs and payments through a calm, precise visual language.

Open

Make the next action easy to understand.

Precise

Show the mechanism and label its status.

Confident

Use strong scale, clear contrast and space.

WORKING BRAND EXPRESSION

Open systems. Clear signals.

Use as a design principle. Product claims still need current evidence; this guide does not define a roadmap or announce integrations.

The face and the name belong together.

PRIMARY HORIZONTAL LOCKUP

Use the supplied OLANAS lettering. The angled A forms are part of the artwork, not a font choice.

Source: original logo(1).jpg and the OLANAS letters in Banner(1).png. The adjacent X / dinosaur is excluded from the core startup lockup.

Preserve the asymmetry.

Square left eye. Circular right eye. Short horizontal mouth. Black circular face with white features.

One identity. Two environments.

LIGHT / BLACK SYMBOL + WORDMARK

DARK / WHITE CARRIER + WORDMARK

Keep the face intact

In dark layouts, a white carrier tile separates the original black face from the background.

Choose the right asset

Use the light or dark lockup SVG. The wordmark changes colour; the face stays black and white.

Give the identity room to work.

x = SYMBOL DIAMETER

CLEAR SPACE >= 0.25x

Measure clear space from the outermost visible artwork, including a dark-mode carrier.

For smaller favicons, use the symbol only and inspect the exported size. Do not force the full wordmark into an avatar.

ASSET	MINIMUM
Symbol	24 px
Full lockup	160 px wide
Symbol in print	8 mm
Lockup in print	35 mm wide

Never stretch, rotate, add facial details, substitute lettering, add glow or place the logo over lines. Do not attach campaign graphics to the master.

Black is structure. Green is signal.

Black

#050505

Canvas / text

White

#FFFFFF

Space / text

Signal

#00D96B

Primary action

Deep green

#00823F

Text on white

Soft green

#E8F8EE

Quiet emphasis

Graphite

#202124

Secondary surface

Use neutral surfaces for most of the composition. Reserve bright green for one primary action, selected state or focal point. Green is a role, not a fixed percentage of every canvas.

Theme changes. Meaning stays the same.

Explore APIs

Clear surfaces. One primary action.

View projects

ACTIVE

Explore APIs

Clear surfaces. One primary action.

ACTIVE

TOKEN	LIGHT	DARK
canvas	#FFFFFF	#050505
surface	#F5F7F6	#101412
text / muted	#050505 / #59665F	#FFFFFF / #ADB8B1
accent-text	#00823F	#00D96B

BLACK ON SIGNAL 10.8:1 / DEEP GREEN ON WHITE 4.9:1

Three voices. One hierarchy.

Aa

Space Grotesk

Display / 700. Compact, confident headlines. Use the logo SVG for the brand name.

Readable by default.

Inter / 400 + 600. Product text, explanations and controls. Sentence case; normal tracking.

REQUEST_ID: 001

IBM Plex Mono / 400. Short metadata, code and status. Preserve case in real code.

ROLE	SIZE / LINE HEIGHT	WEIGHT
Display / heading	64/68, 48/54, 32/40	700
Subhead / body	24/32, 16/24	600 / 400
Label / code	12/16, 14/20	600 / 400

Build with rhythm, not guesswork.

12 COLUMNS / 24 PX GUTTER / 1200 PX CONTENT MAX

VIEWPORT	COLUMNS	MARGIN / GUTTER
Compact <768 px	4	20 / 16 px
Medium 768-1199 px	8	32 / 24 px
Wide >=1200 px	12	48 / 24 px

SPACING SCALE

Buttons make the next step obvious.

SECONDARY

LOADING

Read docs

Submitting...

RULE	APPLICATION
Primary	Signal Green + Black text
Secondary	Neutral surface + visible border
Focus	2 px ring / 2 px offset
Destructive	Error colour + clear verb

One primary action

44 px control height. 16 px horizontal padding. 8 px radius. Keep labels short and verb-led. Loading blocks duplicate submissions.

On dark surfaces use the dark control-border token. Keep hover, focus, loading and disabled behavior consistent across the product.

Labels, feedback and recovery.

DEFAULT

Project name

Weather API

Use a short, descriptive name.

ERROR

Project name

Weather API

 This name is taken. Choose another name.

Always visible labels

Place labels above fields. Use placeholder text only for an example. Show help before the action and a specific recovery message after an error.

Changes saved

Status combines an icon and words. It remains understandable without colour.

Use control-border for interactive outlines. The softer line token belongs to dividers and passive cards.

Show the useful information first.

ILLUSTRATIVE PROJECT

Weather API

A concise description of the result a developer can request.

Planned

In the roadmap

In progress

Being built

Live

Available now

Needs attention

Action required

A green state is not proof of availability. Apply status labels only when they match the actual product.

Functional symbols. Consistent strokes.

24 PX GRID / 2 PX STROKE / ROUND CAPS / NO MIXED STYLES

Use icons with labels for unfamiliar actions. Generic agent icons must not imitate or replace the Olanas face.

The Signal Path directs attention.

01

Keep it sparse

5-12 paths. One green path. Quiet neutral supporting lines.

02

Give it a purpose

Connect steps, guide the eye or show the moment a state changes.

03

Protect the content

Keep it away from logos, paragraphs, charts and small labels.

Say what changed. Show why it matters.

Product voice

Direct, calm and specific. Start with a useful outcome.
Explain technical terms when the reader needs them.

Community voice

Warm and conversational. Short sentences. A little wit is welcome; clarity still comes first.

INSTEAD OF

WRITE

Revolutionary AI infrastructure

A simpler way for agents to use paid APIs.

Huge things coming soon

We are testing the next release.

Partnered with [team]

In talks with [team], if that is the current status.

Requests = people

Label requests, wallets and people separately.

Write Olanas in prose and \$OLANAS for the token. Use x402, API and MCP consistently. Captions explain; graphics communicate one idea.

One idea per frame.

ILLUSTRATIVE ANNOUNCEMENT

Hierarchy over decoration.

- 1. Small logo, consistent placement.
- 2. A headline of 4-9 words.
- 3. One diagram, interface crop or proof point.
- 4. Brief context in the accompanying post.

FORMAT	SAFE MARGINS
1080 x 1080	72 px all sides
1080 x 1350	72 px sides / 88 px top-bottom
1920 x 1080	120 px all sides

1080 px canvas: headline 72-112 px; body 36-44 px; metadata >=24 px. Keep graphics under 25 words.

Small logo. Big channel name.

DARK / INTERNAL

DARK / INTERNAL

LIGHT / COMMUNITY

Export at 1024 x 1024. Keep the identity and title inside a centred circle with a diameter of 760 px. Inspect at 64 px. The face remains dark, including on the light Portal avatar.

Explain the mechanism.

EXAMPLE / NOT LIVE CODE

Request. Pay. Get the result.

SCHEMATIC FLOW / NOT AN ENDPOINT

- 01 Agent requests a paid API
- 02 Payment step is completed
- 03 API returns the result

Show the actual flow.

Use real UI or verified examples in published walkthroughs. Put setup requirements and supported options in the caption or docs.

Do not use decorative endpoints, transaction hashes, partner logos or live-status claims as texture.

Flexible layouts. Familiar structure.

Builder Program

BUILD WITH OLANAS

Builder / campaign

One editorial headline, one useful action. Add programme details in the post.

ILLUSTRATIVE ROADMAP

01 **Discovery**

02 **Build**

03 **Validate**

04 **Release**

Roadmap / progress

Four stages maximum. Add real statuses and a version date before publishing.

Make room for personality.

01

Meme

Keep the joke native to its format. Add a small logo or quiet footer; avoid a corporate frame around every reaction.

02

In the wild

Use 2-6 comic panels. Show a relatable problem, then explain the mechanism. Green marks the payoff.

03

Community

Feature people, questions and moments. Keep the tone warm and the identity consistent.

CAMPAIGN DEVICES ARE TEMPORARY

The X / dinosaur artwork in the supplied banner is a campaign element. Keep it separate from the core Olanas logo unless a specific campaign calls for it.

Clarity is part of the identity.

COLOUR PAIR	CONTRAST	USE
Black / Signal	10.81:1	Primary button text
Deep green / White	4.92:1	Accent text on light
Muted / White	6.02:1	Secondary light text
Muted dark / Black	9.97:1	Secondary dark text

Design targets

Normal text: 4.5:1 or higher. Large text and essential control boundaries: 3:1. Use words or icons alongside colour, and keep keyboard focus visible.

Motion

120 ms feedback. 180 ms transitions. 240 ms panels. Use opacity and small position changes; avoid decorative looping.

Reduced motion

Remove nonessential animation and smooth scrolling. Preserve all content, status and functionality.

Solid sRGB ratios. Recheck actual states. Targets: WCAG 2.2, SC 1.4.3 and 1.4.11; source links in README.

A shared vocabulary for design and code.

INCLUDED / TOKENS.CSS

```
--ol-primary: #00D96B;  
--ol-on-primary: #050505;  
--ol-radius-control: 8px;  
--ol-radius-card: 12px;  
--ol-space-4: 16px;  
--ol-control-height: 44px;  
--ol-motion-standard: 180ms;
```

Foundations

Import colour, spacing, type and radius tokens.
Use semantic theme roles in components.

Components

Build buttons, inputs, cards and statuses from the same foundations. Inspect every state.

Templates

Use the editable SVG starters for announcements and Telegram. Change the message, retain the hierarchy.

Package includes source-derived logo SVGs, editable social SVGs, CSS / JSON tokens, font files with licences, and the editable PDF-generation source.

Keep one source of truth.

Adopt, then maintain

Assign a brand owner and a product UI owner. Record token changes in a changelog. Review exceptions when they recur; promote useful patterns into the system.

Before an asset ships

Check the logo, theme, small-size legibility, crop, text contrast and actual product status. Export in sRGB and preview at the size people will see.

V1.0 / WHAT CHANGED

Unified source-derived identity; added dark / light tokens, readable green text, UI states, Telegram rules, practical social layouts and reusable implementation files.

SOURCE AND ASSET NOTES

Replaces the supplied v0.1 kit. Identity traced from logo(1).jpg and Banner(1).png. SVGs preserve the supplied raster contours; they are not recovered original vector masters.

Fonts: Space Grotesk, Inter and IBM Plex Mono, with their supplied OFL licence files. Original source URLs and reproduction notes are in the package README.
