

BRAND SYSTEM / SEPTEMBER 2026

BRAND + VISUAL IDENTITY KIT V0.1

A practical system for clear infrastructure communication,
technical storytelling, and social-native expression.

STRUCTURE

SPACE

SIGNAL

DIFFERENT FORMATS / SAME OLANAS DNA

Brand overview

Make complex exchange feel legible.

OLANAS communicates infrastructure around files, APIs, access and payments. The identity should make these systems understandable at a glance without flattening their technical character.

Design objective

Recognition should come from the relationship between structure, space and signal - not from placing the logo everywhere.

CORE

Serious by default

Clear hierarchy, evidence-led copy, precise interface cues.

RANGE

Playful by permission

Humor and comics live in defined formats, not in every asset.

- Structure: bold type, disciplined grid, black panels and clear information order.
- Space: generous white fields, quiet surfaces and intentional breathing room.
- Signal: green appears only where an action, state or key idea changes.

Reference audit

Retain

- Bold editorial headlines
- Black, white and signal green
- Rounded functional cards
- Thin network lines
- Simple line icons

Systematize

- Wave density and placement
- Green hierarchy
- Logo lockup rules
- Type tracking and scale
- Card geometry

Key diagnosis

The visual ingredients are strong. Recognition is weakened when waves, gradients, microcopy and cards change role from post to post. V0.1 assigns each element a job.

Brand personality

OPEN

Makes access and information feel understandable.

PRECISE

Uses clear hierarchy and technically accurate labels.

INTELLIGENT

Explains systems without unnecessary jargon.

CONFIDENT

Uses decisive scale, contrast and whitespace.

CURIOUS

Asks how files, APIs and value can move better.

HUMAN

Shows the people and friction behind infrastructure.

WITTY

Uses controlled humor in social-native formats.

Tone range

Infrastructure content stays calm and exact. Community content may become warmer. OLANAS IN THE WILD may be irreverent, but the visual grammar remains controlled.

Visual philosophy

BLACK IS THE STRUCTURE.
WHITE IS THE SPACE.
GREEN IS THE SIGNAL.

Black organizes the system. White gives information room to breathe. Green marks the moment something happens: a request, action, confirmation, status change or key idea.

OLANAS

Working principle

Show the system clearly. Mark the change precisely.
Leave everything else quiet.

Recommended brand line

Open systems. Clear signals.

Use as a design principle until formally approved.

Colour system

OLANAS BLACK

#050505

Structure / dark fields

OLANAS WHITE

#FFFFFF

Space / clarity

SIGNAL GREEN

#00D96B

Action / state change

SOFT GREEN

#E8F8EE

Quiet activated surface

GRAPHITE

#202124

Secondary structure

LINE GREY

#DDE2DF

Borders / passive lines

Adjustment from the proposed palette

Use #00D96B instead of #00E676 as the main green. The original is vivid but blooms on white at small sizes and can feel like a generic success colour. The slightly deeper green preserves energy, improves edge definition, and remains distinctive. Keep #00E676 only as a digital highlight test, not as the default.

Colour usage rules

Default distribution

- Reserve green for one primary message or active path per composition.
- Do not set long paragraphs in green.
- Never place white body text on Signal Green at small sizes; use OLANAS Black.
- Use Soft Green for context, never as the strongest call to action.
- Use red, amber or blue only when product semantics require them; they are interface utilities, not brand colours.

Typography

Editorial clarity at social speed.

HEADLINES	Space Grotesk	Bold 700	Large, compact and confident.
SUBHEADS + BODY	Inter	Regular 400 / Semibold 600	Readable across social, decks and web.
TECHNICAL	IBM Plex Mono	Regular 400 / Medium 500	Code, status, endpoints and metadata.
FALLBACK	Arial + Courier New	Bold / Regular	Use only when preferred fonts are unavailable.

Practical note

All three recommended families are open-source and broadly available through Google Fonts. Confirm licensing and bundle versions before production deployment.

Font hierarchy

Launch what people can use.

Signal one decisive idea.

Section title / 24-32 px / 120% line height

Body / 16-20 px social equivalent / 145% line height

STATUS: LIVE • REQUEST: 001 • HTTP 402

TYPE

Rules

Headlines use sentence case or controlled uppercase. Keep tracking between -2% and 0% for display type. Body copy uses normal tracking. Mono labels may use +4% to +8%. Limit each asset to three weights and two font families, plus mono.

Avoid

Wide tracking on headlines, condensed techno fonts, green paragraphs, center-aligned body copy, and more than two headline sizes on one social tile.

Grid and layout

12-column master grid

Build variety by changing spans, not by abandoning alignment.

ACTIVE SIGNAL / 07

Format rules

- 1:1 / 1080 × 1080: 72 px safe margin; 6-column working grid.
- 4:5 / 1080 × 1350: 72 px sides, 88 px top and bottom; 6 columns.
- 16:9 / 1920 × 1080: 120 px safe margin; 12 columns.
- Portrait comic: 64 px sides; 2-column panel rhythm; 40 px gutters.
- PDF: 8% outer margin; baseline rhythm based on 8 pt.

Alignment rules

- Use one dominant edge per asset.
- Headlines span 6-9 columns.
- Keep logo and footer on the same alignment rail.
- Use asymmetry deliberately; do not float elements.

Logo usage

Protect the face. Standardize the lockup.

The symbol is simple and recognizable. Keep its geometry untouched. The wider wordmark shown in the references should be treated as a separate approved asset and exported consistently rather than rebuilt in each post.

SPACE

Clear space

Minimum: one eye width around the symbol.

SIZE

Minimum size

Digital symbol: 24 px. Full lockup: 120 px wide.

POS

Placement

Prefer top-left; center only for covers or partnerships.

Approved

Black on white. White on black. Black symbol on Signal Green. One-colour reproduction.

Do not

Stretch, rotate, outline, add glow, recolour individual facial features, place over busy waves, or combine with unofficial mascots.

Iconography

STROKE

2 px at 24 px

CAPS

Round

CORNERS

4 px controlled radius

GRID

24 × 24

COLOUR

Black passive / green active

FILLS

Only active or selected states

Build a small owned set first

Start with file, lock, API, request, payment, access, creator, developer, agent, chain, status and arrow. Redraw them on one grid. Avoid mixing library icons with different proportions or corner behavior.

ICON TEST: IF THE SHAPE IS NOT LEGIBLE AT 24 PX, SIMPLIFY IT.

Signature motif

From flowing lines to a governed asset

Name the motif the Signal Path. It visualizes requests, value and access moving through an open system. Its job is to guide the eye or connect stages - not to fill empty space.

Construction

- Use 5-12 parallel paths.
- Default line: 1 px at 1080 px; hero line: 2 px.
- Passive paths use Line Grey at 25-55% opacity.
- One active path may use Signal Green.
- Crop at two canvas edges; occupy 10-28% of the canvas.

Do not use

- Behind body copy or the logo.
- As a dense full-page texture.
- With glows, rainbow gradients or particle effects.
- More than once in a small social tile.
- When a chart or comic panel already carries the movement.

Technical UI language

STATUS: LIVE

REQUEST: 001

PAYMENT: CONFIRMED

HTTP 402

ACCESS: GRANTED

FLOW

REQUEST → PAY → ACCESS

Use process strings for explainers, launches and product education. Keep them short enough to scan in one breath.

API

GET /weather 200 OK

Use endpoint-like examples only when they are accurate or clearly marked as illustrative. Never imply a live endpoint from decorative copy.

System rules

- Mono is metadata, not the headline voice.
- Use one technical panel per composition unless the content is a product walkthrough.
- Labels use uppercase; code preserves real case.
- Green marks active state; neutral states remain graphite or white.
- Never fabricate response codes, endpoints, metrics or availability.

Cards and components

12 PX

Default card

White or Soft Green surface, 1 px Line Grey border, no shadow.

ACTIVE

Active card

Signal Green outline or indicator. Do not tint every card.

SYSTEM

Technical panel

Black surface, white data and one green state.

- Radius**

12 px card / pill badges only
- Border**

1 px #DDE2DF
- Shadow**

0 8 24 / 6% black, optional
- Button**

44 px minimum height
- Badge**

Mono 11-13 px equivalent
- Divider**

1 px passive grey
- Arrow**

Straight, geometric, 2 px stroke
- Stack gap**

16-24 px

GLASSMORPHISM: OPTIONAL FOR HERO CAMPAIGNS ONLY / NEVER THE DEFAULT COMPONENT STYLE

Social media system

One idea per frame. One green signal per idea.

01

HOOK

4-9 words; readable at thumbnail size.

02

PROOF

One diagram, UI crop, number or concrete fact.

03

CONTEXT

Short supporting line; move detail into the post copy.

04

SOURCE

Use URL, date or status when the claim needs verification.

Mobile rules

- Minimum display text: 36 px equivalent on 1080 px canvas; metadata: 22 px.
- Keep essential content inside the central 86% safe area.
- Prefer 25 words or fewer on a single announcement graphic.
- Carousels: cover, problem, mechanism, example, action. Use only as many frames as needed.
- Humor can open the door; the caption or next frame must restore technical clarity.

Core social templates

ANNOUNCEMENT

Oversized headline + one signal label + restrained path.

Launches, releases, partnerships after approval.

PRODUCT UPDATE

Before/after or UI crop + change summary + status.

Shipped improvements and fixes.

EDUCATIONAL

Question hook + 3-step mechanism + one real example.

x402, APIs, payments and access.

ROADMAP

Four stages max + clear status language + date/version.

Direction with explicit uncertainty.

DEVELOPER UPDATE

Mono metadata + code/UI sample + practical outcome.

Build logs, integrations and documentation.

Template rule

Templates define hierarchy and components, not fixed decoration. Move the Signal Path, image and cards within the grid while preserving their roles.

Expressive social templates

MEME

Native meme image or reaction + OLANAS footer rail.

Avoid forcing the full corporate layout onto internet-native humor.

QUOTE / STAT

Large verified statement + source/date + restrained signal.

Never publish a number without provenance.

COMMUNITY

Human image, reply or event moment + lighter typography.

Secure permission before featuring people or messages.

IN THE WILD

Comic title strip + 2-6 panels + green reveal frame.

Translate friction into a story, then explain the mechanism.

FEATURE SPOTLIGHT

One UI action + user outcome + status.

Show the interface or a truthful schematic.

CAMPAIGN

One campaign device added to the core system.

Time-bound expressions; retire the device after the campaign.

OLANAS IN THE WILD

Series rules

- Use black-and-white art; reserve green for the reveal, payment or access moment.
- Use 2-6 panels. Every panel must advance the friction, mechanism or payoff.
- Character styles may change, but title strip, mono labels, grid and footer remain fixed.
- Speech may be casual. Explanatory captions must be technically clear.
- End with a plain-language mechanism, not a sales claim.

Applying the system

x402 launchpad poster

KEEP Retain the bold headline and 3-step flow.

EVOLVE Reduce corner microcopy; use one Signal Path; normalize icon stroke and card radius; mark technical wording for team confirmation.

Roadmap

KEEP Retain the four-stage structure and clear completion cue.

EVOLVE Add date/version; separate shipped, active and planned states; remove unsupported timing; reduce green haze.

Builder Program

KEEP Retain the bold editorial block and stacked action cards.

EVOLVE Use Signal Green only on the active verb or CTA; reduce soft glow; align cards to a 12-column grid.

Banner

KEEP Retain whitespace and centered lockup.

EVOLVE Move waves behind, not through, the lockup; control density; use an approved wordmark file.

Principle Evolve the system by clarifying roles - not by replacing every recognizable element.

Do and do not

DO

- Use green to show action or state change.
- Keep one dominant message.
- Align every element to a visible grid.
- Use whitespace as part of the identity.
- Verify technical language before publishing.
- Use consistent icons and component geometry.
- Let humor live in the right content format.
- Show dates and sources for roadmaps and statistics.

DO NOT

- Turn the canvas green by default.
- Use coins, chains, hexagons or cyberpunk imagery as shortcuts.
- Place waves behind important text.
- Mix outline, filled and 3D icon sets.
- Add gradients, glow or glass without a functional reason.
- Rebuild the logo from text.
- Publish decorative endpoints, metrics or partnerships as facts.
- Make every post use the same composition.

Items requiring confirmation

- **Logo master files**

Confirm vector symbol, wordmark, lockups, monochrome variants and ownership.

- **Product language**

Confirm current support for paywalled files, APIs, on-chain payments, x402 and AI agents.

- **\$OLANAS utility**

Confirm approved wording, availability, payment role and legal/compliance constraints.

- **Public proof**

Confirm statistics, partner names, live endpoints and screenshots before publication.

- **Official green**

Approve #00D96B after accessibility and product UI testing.

- **Network references**

Confirm the exact relationship to Robinhood Chain / L2 before public use.

- **Roadmap status**

Confirm what is shipped, active, planned or exploratory; add dates or versions.

- **Fonts**

Confirm licensing, web performance and product implementation ownership.

Status rule Until confirmed, label material as CONCEPT, PROPOSED, EXAMPLE or EXPLORATORY. Do not let visual polish imply product certainty.

Future scalability

01

TOKENS

Colour, type, spacing, radius, stroke and motion values.

02

COMPONENTS

Cards, labels, status chips, arrows, paths and footer rails.

03

TEMPLATES

Flexible content structures with named use cases.

04

GOVERNANCE

One master asset library, changelog and approval owner.

Recommended next build

- Create vector logo masters and a documented lockup sheet.
- Build the 12-icon starter set.
- Create Figma components for social cards, labels, footers and Signal Paths.
- Pilot five templates using real upcoming OLANAS content.
- Review after 30 published assets; promote successful patterns into v1.0.

OLANAS brand DNA

01 Lead with one clear idea.

03 Use white for space.

05 Build on the grid.

07 Use mono only for technical metadata.

09 Keep UI components quiet and consistent.

02 Use black for structure.

04 Use green only as signal.

06 Use bold sans for the message.

08 Let the Signal Path show movement.

10 Verify every technical claim.

OPEN SYSTEMS. CLEAR SIGNALS.

BLACK #050505 / WHITE #FFFFFF / GREEN #00D96B
